

Lawn Care made easy!

for Bermuda, St. Augustine, & Zoysia Grass Lawns

Step #1

Apply February through March

Contains a balance lawn food with trace elements plus a special weed killer designed to control weeds before they come up. Apply at first warm weather and water thoroughly. This is a critical step for a weed-free lawn.

Step #2

Apply April *

A complete lawn food plus a weed killer to get rid of spring broadleaf weeds. Apply to damp grass then water deeply after 24 hours.

For complete weed control apply **ferti-lome liquid Weed Out** 10-14 days later.

*if weeds are not a problem..... use

Step #3

Apply May

"Contains "Barricade". A new pre-emergent herbicide, safe for use on all types of lawns. Provides excellent control of most common broadleaf and "grassy" type weeds. Provides one full season of weed control. Contains a 16-4-8 lawn food + trace elements

Step #4

Apply June through August

"Super" greening power. A high Nitrogen-based lawn food with vital trace elements like *iron* to keep your lawn green all summer. A second application is recommended in the summer for Bermuda Grass lawns. Apply & water thoroughly.

Step #5

Apply September Through October

Specially designed fertilizer to put your lawn to bed for the winter along with an ingredient to control weeds that germinate in the fall, and come up during the next few

Step #6

Apply November Through December

Contains "Dimension", a pre-emergent weed control, designed to control poa-anna (annual bluegrass), a weed common in this area. Apply during the holidays and water thoroughly.
